PARTS AND ILLUSTRATION CATALOG

IMPORTANT

Exclusive Canadian and/or overseas export parts are published in this catalog in order to facilitate vehicles sold in Canada or overseas that may require service in the United States.

Your feedback and suggestions are requested to assist us in publishing the most complete and comprehensive catalogs possible. Please address any correspondence concerning this publication to the attention of the Engineering Department and include your address and dealer code to ensure a timely reply.

To ensure accurate and timely response to written correspondence involving catalog illustrations, please include the art number displayed in the upper right corner of each illustration. Unlike page numbers, this number remains constant from publication to publication and provides positive identification.

INTRODUCTION
CARLINE / LIGHT TRUCK CATALOG

Passenger Car/Light Truck Parts Catalogs have been compiled for the purpose of locating, identifying, and ordering replacement parts. All data and specifications contained in these publications are based on the latest product information available at the time of printing. General Motors Service Parts Operations reserves the right to make changes at any time without notice in data, price, specifications, materials and model. The "List Prices" shown are suggested prices only for sales to consumers.

Replacement parts are listed in Passenger Car/Light Truck catalogs under 17 major groups, as shown on the content page. Individual parts are assigned a Prime Group number, the first numeral of the group identifies the main unit it is affiliated with and following the decimal is the Minor Group number under which all parts of the same name and function are listed. For example, Group 0.519 Camshaft. The "0" denotes that it is an Engine Part, "519" the Minor Group where all Engine Camshafts are listed. Related parts may also be found in the same group. Within each group, parts are listed by model year, vehicle series, part number, number used per vehicle or R.H.-L.H. designation, suggested list price, part name and description.

Parts may be used in different locations on the car requiring the listing of the part number in more than one group. When this "Cross Referencing" occurs, the prime group is shown in brackets, i.e.(1.850) in the description column.

To locate a listing for a part, determine the model vehicle and refer to the group number identifying it, which may be determined by using any of the following methods.

A. When the name of the part is known, consult the ALPHABETICAL INDEX in the regular Passenger Car/Light Truck Catalogs, which lists parts by noun name and Group Number where part is listed.

B. Reference may be made to the ILLUSTRATIONS, where Group Numbers, noun names or part numbers are shown.

C. When a part number is known and model application or a similar part is required, consult the DEALER PRICE SCHEDULE for the Group Number to locate the part in the Parts Catalog.

Parts having application or used with optional equipment are identified by Option Number or abbreviation of option. Familiarity with Option Numbers will assist in determining correct part required.

For complete identification of models refer to the specific carline/light truck catalog.

For complete option definition refer to the reference catalog.

Service part numbers are assigned to individual parts that make up an assembly used in the production of models. Certain items may not be listed, such as short tubing parts or fuel lines that can be made up by dealers from bulk material or attaching parts may be included in packages with the major assembly and not listed separately.

Passenger vehicles contain many parts dimensioned in the metric system. These parts are very close in dimension to familiar customary measurements in the inch system. It is important that during any vehicle maintenance procedure, replacement fasteners have the same measurements as those removed, whether metric or customary. Mismatched or incorrect fasteners can result in vehicle damage or malfunction, or possibly personal injury.

Fastener sizes denoted on illustrations may not reflect metric dimensions. However, since the same vehicle may be built with metric or customary fasteners, care should be exercised in selecting replacement part equivalent to the original fasteners in dimensions, strength and pitch of thread. Both metric and customary fasteners required for replacement are listed in the Service Parts Operations Standard Parts Catalog.

A special Service Parts Operations label, saying "Metric Fasteners Required" in red letters, will be used to identify service parts which require metric fasteners but replace parts which originally used inch fasteners. This label will enable dealers and over-the-counter customers to quickly recognize parts which have changed to metric fasteners.

Right Hand and Left Hand parts are so designated from the driver's position when seated in the vehicle.

ENGINE SERVICE POLICY

COMPLETE PRODUCTION OEM ENGINE ASSEMBLIES IN GROUP 00.000 ARE OFFERED FOR SERVICE DURING THEIR PRODUCTION CYCLE ONLY. IN ADDITION, AT LEAST ONE OF THE FOLLOWING WILL BE OFFERED FOR EACH ENGINE SERVICE APPLICATION.

AS A PARTIAL ENGINE IN GROUP 00.033

AS A GOODWRENCH NEW, OR REMANUFACTURED ENGINE IN GROUP 00.000 SUB GROUP A (FOR PASSENGER CAR & LIGHT DUTY TRUCK), GROUP 00.000 SUB GROUP B (FOR MEDIUM DUTY TRUCK)

AS A COMPLETE ENGINE EXCHANGE THROUGH THE DIVISIONAL SERVICE GROUPS (PROCEDURE IS COVERED ON TECHNICAL SERVICE BULLETINS)

ENGINE STAMPING INFORMATION

The Engine Plants will stamp a source, production date, and type designation, on the engine, as shown below.

4-Cylinder 140 C.I.D. - stamped opposite the number three cylinder, on the right side of the case, on the left side of the pad, as close to the rear as possible.

All 6-Cylinder - stamped on crankcase, on right hand side of engine, to rear of distributor.

All 8-Cylinder except Mark IV - stamped on top front of right hand bank of cylinder and case, as close as possible to upper end of pad.

All Mark IV - stamped on top right hand bank of cylinder and case, as close as possible to lower end of pad.

"F" will designate Flint Motor, "Y" - Flint Engine, "T" - Tonawanda, "S" -Saginaw Parts, "K" - GM of Canada LTD, "M" - GM of Mexico, and "H" - Hydramatic.

The four digit number following the source designation will indicate the calendar month and day produced. Of the four digits, the last two will always indicate the day, VIZ 01 for the first day of the month, 02 for the second day, etc. The two digits preceding the date produced will indicate the month VIZ, 01 for January, 02 for February, and 12 for December.

EXAMPLE: January 1st would read 0101.

A standard 1HACO series type, if built in Tonawanda on January 1st would be stamped T0101CLW. The first character of the type designation will always be "C" or "Z", for Passenger and "T" or "A" for Truck.

Note: The engine plants are to stamp the serial pad of all current model service engines with the source, production date, and the same type designation as stamped on the comparable production engine.

On Irrigation engines a four digit sequential serial number beginning with 1001 for each engine, will be stamped adjacent to the engine date stamp and will identify each Irrigation engine built.

INTRODUCTION

THIS ILLUSTRATION CATALOG HAS BEEN COMPILED TO ASSIST IN THE LOCATION AND IDENTIFICATION OF SERVICE PARTS.

DURING EACH CALENDAR YEAR COMPLETE REPRINTS OF THE CATALOG ARE PUBLISHED AS PART OF THE CATALOG REVISION SERVICE. NEW OR REVISED ILLUSTRATIONS ARE MAILED TO DEALERS SUBSCRIBING TO THE REVISION SERVICE AS THEY ARE SCHEDULED.

EACH ILLUSTRATION IS IDENTIFIED BY AN ART NUMBER IN THE UPPER RIGHT HAND CORNER. PLEASE REFERENCE THIS NUMBER WHEN INQUIRING ON AN ILLUSTRATION.

ALL SPECIFICATIONS AND ILLUSTRATIONS CONTAINED IN THIS PUBLICATION ARE BASED ON THE LATEST PRODUCT INFORMATION AVAILABLE AT THE TIME OF PRINTING. SERVICE PARTS OPERATIONS RESERVES THE RIGHT TO MAKE CHANGES AT ANY TIME WITHOUT NOTICE IN DATA, SPECIFICATIONS, MATERIAL AND MODELS.

** FOR YEARS 1994 AND FORWARD POWERTRAIN CONTROL MODULE DOES NOT CONTAIN A SERVICED EPROM. THE SERVICE MODULE WHICH INCLUDES CONTROLLER AND EPROM (CALIBRATOR) MUST BE PROGRAMMED IN-DEALERSHIP.

NOTE: Due to Clean Air Act, calibrator is now called an EPROM and Controller is now called a Module.

PCM = Powertrain Control Module: Controls both Engine and Tranmission.
ECM = Engine Control Module: Controls only Engine.

When replacing the Production ECM/PCM Module with a Remanufactured ECM/PCM Module it is important to transfer the Production Broadcast Code And Production ECM number to the Remanufactured ECM Module Label. Please do not record on ECM Cover. This will enable positive identification of ECM/PCM Components throughout the service life of the vehicle.
